

Experiment no. 7

Aim: Write a program in C to find the whether number is prime or not.

S/w: Turbo C

Theory:

Step1 – Start.

Step2 – Add all the required header files.

Step3 – Declare a variable num, i, c.

Step4 – Take the input from the variable ..

Step5 – Now, use for if – else statement.

Step6—In the last, run the code.

Code:

```
#include <stdio.h>
```

```
int main(){
```

```
int num, i, c = 0;
```

```
printf("Enter an Number: ");
```

```
scanf("%d", &num);
```

```
// logic
```

```
for (i = 1; i <= num; i++){
```

```
if (num % i == 0){
```

```
c++;
```

```
}
```

```
}
```

```
if (c == 2){
```

```
printf("%d is a Prime Number.", num);
```

```
}  
else {  
    printf("%d is not a Prime Number.", num);  
}  
return 0;  
}
```

OUTPUT:

```
Enter an Number: 5  
5 is a Prime Number.
```

```
Enter an Number: 10  
10 is not a Prime Number.
```
